

Intermedia AppID

Intermedia simplifies your entire cloud footprint by letting you manage usage, limit functionality and audit activity for ANY app.

Improve your security even as your cloud footprint multiplies

Get more control with central access over all your apps

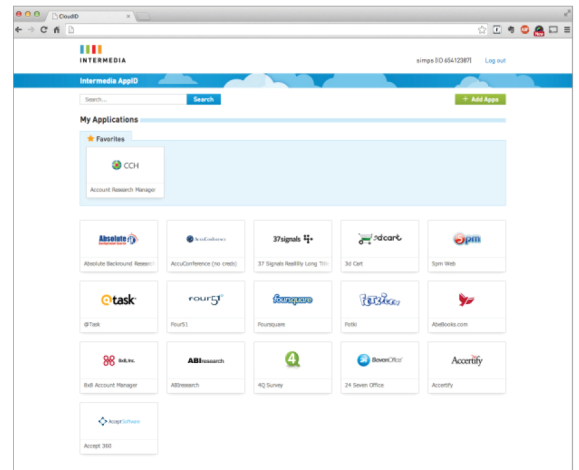

Make your users more productive and more efficient.

Works with any app—including those you've developed yourself

The cloud delivers tremendous benefits to a business's IT agility and user productivity. But as the quantity of services multiplies, the business benefits are threatened by issues of security and control. Users face an overwhelming number of passwords to remember, and often cope with insecure password practices. And IT struggles to control which apps are in use and which users can access what data.

Intermedia AppID solves the problem of cloud service proliferation. It gives users a single sign-in portal for ALL their web applications. And it gives IT central control over access and security for your entire cloud portfolio.

Single Sign-On Portal

Manage the apps that employees can use

App Shaping

Limit what users can see and do in an app

App Audit Trails

Assess what users saw and did in an app

Single Sign-On Portal

Manage the apps that your employees use

Intermedia's Single Sign-On portal provides a single point of access to all the web apps an employee uses, regardless of provider.

App Shaping

Limit what users can see and do in an app

Intermedia's App Shaping capabilities let administrators limit specific features in any app. These can include user interface elements, specific kinds of content, and even general browser

App Audit Trails

Asses what users saw and did in an app

Intermedia App Audit Trails give you total visibility into ALL user activity in ANY web app. This extends from login to logout and every point in between, down to any click in any app, if you should choose.

Improve your security by eliminating the threats associated with multiplying cloud services.

- Enforce strong password policies to eliminate bad password behavior
- Ensure secure access regardless of vendor or authentication standard
- De-provision users and devices from all apps from a single console

Get more control by centralizing access to all your cloud apps (while reducing the complexity of managing them).

- Deploy apps to individuals or groups with just a few clicks
- Centralize management over Salesforce, Webex, NetSuite, and hundreds of others cloud apps—as well as your proprietary apps
- Leverage your existing directory tools

Make users more productive with one-click access to all their apps—and just one password to remember. Users can:

- Self-provision apps without IT's help (but with IT's control)
- Build a "favorites" row for easy access to common apps
- Access their web apps through the AppID portal on any computer or through a mobile app

Rely on Intermedia's worry-free experience to keep your users and admins focused on being productive.

- Get white-glove setup assistance for rapid deployment of AppID
- Receive 24/7 phone and chat support any time you need expert help
- Retain peace of mind knowing that AppID is architected with total security for your users, their data and their password
